

Spare parts problems?

www.sedo-treepoint.com

Replace old dye house controllers easily with a Sedomat 1800

Do not wait, until spare parts are no longer available or cost you a fortune. By using a Sedomat 1800 with Plug'n'Play software you get a cost effective solution offering the latest in dyehouse automation technology.

A local electrician can start-up the machine by himself and if you are used to work with a certain controller model, you can enable the familiar user interface of your former controller (e.g. PC1000, Sedomat 1500, etc.) on the new Sedomat 1800.

Plug'n'Play
easy installation and connection
